

Indicators and scoring criteria for assessing timber and pulp producers, processors and traders – July 2020

SPOTT uses a detailed framework of indicators and scoring criteria to assess timber and pulp producers and traders on the public disclosure of their policies, operations and commitments to environmental, social and governance (ESG) best practice. This ensures a fair and consistent approach to assessing all companies on SPOTT. To gain points, a company must make the required information publicly available on its website; within its annual reports, sustainability reports, presentations or other public documents; on the websites of its parent company and/or subsidiaries (if applicable), or on specific third-party platforms (“External sources”).

SPOTT classifies indicators according to the following categories:

Organisation: The transparency and content of company disclosure regarding its operations, assets and management structure.

Examples include total landbank hectarage, the number of mills owned, reporting of salary by gender, and whether the company publishes a sustainability report.

Policy: The transparency and content of company disclosure regarding the policies, commitments and processes it has to guide its operations and practices on the ground.

Examples include policies on no deforestation, zero burning, and respecting human rights.

Practice: The transparency and content of company disclosure regarding activities it undertakes, in order to actively progress towards its targets and implement its policies and commitments on the ground.

Examples include reported activities to monitor deforestation and to manage fires in concessions, and the percentage of the company’s supply traceable to mill and plantation/concession level.

Within the practice category, SPOTT differentiates between data that is self-reported by companies and data that is externally verified (aligning with the Accountability Framework Initiative [AFi]),¹ as follows:

Externally verified: Assessment and validation of compliance, performance and/or actions taken by a company relative to its commitment that is verified by either a second- or third-party (as defined by the AFi).

Self-reported: Reporting of compliance, performance, and/or actions taken by a company relative to its commitment that is not externally verified, including data that is verified by a first-party (as defined by the AFi).

Disclaimer: Indicators have been classified as Environmental (E), Social (S), Governance (G) or a combination thereof. ZSL recognises that many issues cover multiple dimensions of ESG but has classified the indicators based on their predominant impact where possible.
